## Vertically Integrated Nickel-to-Battery-Materials Group

PT Merdeka Battery Materials Tbk (MBMA) is issuing Series A, B and C senior IDR bonds under the fifth phase of its first sustainable bond programme (PUB I), rated idA by Pefindo. With one of the world's largest nickel resources at the SCM mine and an integrated RKEF, nickel matte, HPAL and acid downstream chain, MBMA offers investors exposure to Indonesia's battery-materials build-out at a curve-consistent primary premium.

### Investment Highlights

#### World-class nickel resource base

SCM mine ~13.8mt Ni and 1.0mt Co content, among the largest globally; **ore output +44% YoY to 21.6mn wmt in 2025**, feeding ~82% of internal RKEF ore needs. In 2025 the group produced 73,871t of nickel in NPI and 19,998t in nickel matte, plus 25,994t of MHP and 260,881t of sulphuric acid — a diversified, long-life production base spanning the full nickel value chain.

#### Integrated Margin Resilience

EBITDA +34% YoY to USD219.0mn in 2025 despite revenue –22%; **EBITDA margin up to 15.3% from 8.8%**; MHP and matte ramp lifting value-added mix; **1Q2026 revenue +24.3% YoY**; moderate leverage (L/E 0.59x, interest coverage 6.35x). Gross margin widened to 11.6% in FY2025 and 27.4% in 1Q2026 as ~82% ore self-sufficiency and a richer MHP/matte mix offset lower nickel prices — evidence of genuine through-cycle margin resilience.

#### Blue-chip sponsors

Provident, Saratoga and Garibaldi Thohir; **track record with MDKA, GoTo, Adaro, Tower Bersama**; Huayou strategic partnership; **proven institutional access**; idA (Pefindo) credit profile. Controlling shareholder PT Merdeka Energi Nusantara holds 50.04%, with strategic partner Huayong International (Huayou) at 7.55%. MBMA is an established repeat issuer, having placed idA-rated paper across PUB I–III, underpinning well-tested access to the domestic bond market.

### SUBSCRIBE · Curve-consistent idA proxy to Indonesia's nickel value chain

We view MBMA's indicative coupons of 9.00–10.00% (3Y) and 9.50–10.50% (5Y) as offering a reasonable ~55–80bps pick-up over the secondary idA curve, landing inside idA- comparables and around idA+ live prints — fair value for a scaling, sponsor-backed nickel platform.

## Instrument Summary

## Company Overview

MBMA is the holding company of a vertically integrated group operating across the nickel and battery-materials value chain, **with major assets across Central and Southeast Sulawesi spanning mining, smelting and refining**. It is targeting a position among the leading global integrated producers of strategic raw materials for electric-vehicle batteries.

### One of the world's largest nickel resources, integrated downstream

The SCM mine holds an estimated 13.8mt of nickel and 1.0mt of cobalt content, among the largest globally per Wood Mackenzie. **In 2025 the group produced 73,871t of nickel in NPI and 19,998t in nickel matte, with SCM ore output up 44% YoY to 21.6mn wmt.** RKEF smelters now source ~82% of ore internally from SCM, materially improving cost efficiency. **AIM I acid plant produced 260,881t of acid and HPAL ESG delivered 25,994t of MHP in 2025.** Two further HPAL projects (Meiming, SLNC) reached 83% and 67% construction progress at end-2025. **The pipeline extends to additional HPAL and acid capacity and the IKIP estate.**

| HPAL Meiming                    | MHP (under construction) | 83% complete (end-2025)                                   |
| HPAL SLNC                       | MHP (under construction) | 67% complete (end-2025)                                   |

### Backed by Provident, Saratoga and Garibaldi Thohir

MBMA is sponsored by the Provident Group, Saratoga Group and Garibaldi Thohir, **a consortium with a long record of building multi-billion-dollar Indonesian companies including MDKA, GoTo, Adaro and Tower Bersama**. The sponsors bring proven access to blue-chip international institutional investors. Huayou Cobalt (via HIL) is a strategic technology and offtake partner across several downstream assets.

### Exhibit: Shareholder Structure

Source: Company

### Scaling higher-value products through the cycle

Despite the normalisation of global nickel prices, MBMA sustained strong operating performance in 2025 through structural cost advantages. **Full-year 2025 revenue was USD1.43bn (from USD1.84bn in 2024) on lower commodity prices**, yet EBITDA rose 34% YoY to USD219.0mn as ore self-sufficiency and higher-value MHP lifted margins. **1Q2026 revenue of USD455.1mn was up 24.3% YoY, with operating profit of USD113.4mn.** The shift toward MHP and matte is expected to continue improving the margin mix.

## Business Model & Revenue Segments

MBMA reports across two operating segments — Mining (SCM ore) and Manufacturing (RKEF nickel products, nickel matte, MHP and acid) — with manufacturing the dominant external revenue contributor.

### Manufacturing drives the top line while mining rising as an external contributor

Manufacturing (RKEF, matte, HPAL/MHP, acid) generated USD1.18bn of external revenue in FY25 (82.1% of total), down from USD1,663.4mn in FY24 on lower nickel prices; the segment absorbs SCM ore internally at ~82% self-sufficiency. Mining external revenue rose to USD256.9mn in FY25 (17.9% of total) from USD181.3mn (+41.7% YoY) as SCM ore output climbed 44% YoY to 21.6mn wmt, adding a higher-margin merchant-ore stream alongside internal supply.

**Exhibit: Revenue by Operating Segment**

Source: Company operating-segment note (external revenue).

### Integration cushions the price cycle

Vertical integration — mine to smelter to refinery — lets MBMA capture margin across the chain and defend profitability when prices fall. EBITDA margin expanded to 15.3% in FY2025 from 8.8% in FY2024 despite the revenue decline. The MHP and matte ramp-up should further lift the value-added mix.

## Industry Outlook

### Nickel prices supported by Indonesian supply discipline

Indonesia cut its 2026 nickel ore (RKAB) quota by ~34% to 250–260mn wmt, prompting Macquarie and Goldman Sachs to raise 2026 price forecasts to ~USD17,200–17,750/t; spot trades near USD16,500–16,700/t, below marginal cost.

### But a structural surplus caps the upside

A global surplus of 261–288kt is still expected in 2026 as stainless demand slows and the battery mix shifts toward LFP; prices are responding more to government supply controls than end-demand.

### MBMA positioned at the low end of the cost curve

High ore self-sufficiency (~82%), integrated downstream conversion and a shift toward MHP place MBMA in a defensive cost position, allowing margin expansion even through the 2025 price normalisation.

## SWOT Analysis

### STRENGTHS

- Among the largest global nickel resources (SCM ~13.8mt Ni)
- Vertically integrated mine-to-refinery chain
- ~82% ore self-sufficiency, low-cost position
- EBITDA margin expansion despite price down-cycle
- Blue-chip sponsors (Provident/Saratoga/Thohir)
- Strategic Huayou technology & offtake partnership

### OPPORTUNITIES

- Indonesian RKAB quota discipline supporting prices
- EV/battery-materials demand growth (ex-LFP share)
- MHP/matte ramp lifting value-added mix
- Merchant-ore sales as a new external stream
- Downstream expansion (HPAL Meiming, SLNC, IKIP)
- Import-substitution and domestic value-add policy

### WEAKNESSES

- Earnings sensitive to global nickel prices
- Sizeable capex / construction pipeline
- Net profit to owners still modest vs asset base
- USD revenue vs IDR bond — FX mismatch to manage

### THREATS

- Structural nickel surplus (261–288kt) capping prices
- LFP battery shift reducing nickel intensity
- Regulatory/quota and permitting changes
- Elevated global rates raising cost of funds
- Execution/construction risk on HPAL projects

## Bond Market Overview

### Global: a second energy shock meets a hawkish-on-hold Fed

A Houthi maritime embargo on Saudi Arabia via the Bab el-Mandeb Strait (effective 20 July 2026), on top of the fragile Strait of Hormuz, pushed Brent to ~USD88.6/bbl intraday before partly retracing to ~USD89. Bab el-Mandeb carries ~7.4mn bpd (~7% of global output); if both corridors are blocked, OPEC+'s ~5.1mn bpd spare capacity becomes largely undeliverable. US June CPI fell 0.4% MoM (steepest since Apr 2020) to 3.5% YoY, with core at 2.6%, cutting September Fed-hike odds to ~63%. **The Fed is nonetheless framed as hawkish-on-hold**, with a dot-plot median of 3.8% and a 29 July FOMC in focus. The breakdown of Iran-US ceasefire leaves energy and the rates path the dominant swing factor.

### Indonesia: inflation near the ceiling, first trade deficit in 13 months, and a BI leadership shock

June CPI rose to 3.34% YoY, just 16bps below BI's 3.5% ceiling, driven by administered prices (Pertamax +32% from 10 June); we estimate July at 3.5–3.8%. May trade flipped to a USD1.61bn deficit — the first in 13 months — as the migas gap doubled to USD3.76bn; nickel & derivatives (+60.88% YoY) were the sole export bright spot. At the 21–22 July RDG, BI held the BI-Rate at 5.75% (consensus 6.00%), defending the Rupiah through a policy package (hedging-swap 12.5%, DNDF 15%, KLM 6.0%) rather than the rate; FX reserves stood at USD145.6bn.

**Governor Warjiyo's shock resignation on 25 July — the first voluntary BI-governor exit on record — sent the Rupiah to IDR18,009/USD and revived fiscal-dominance and central-bank-independence concerns;** Destry Damayanti is acting governor. S&P affirmed BBB/A-2 Stable on 13 July, but Moody's (Baa2) and Fitch (BBB) carry Negative outlooks. **The H1 fiscal deficit of 0.76% of GDP remains inside the 3% cap, though subsidies jumped 44% and the full-year gap is projected toward 2.85%.** Government 3Y/5Y yields sit at 7.13%/7.26% (30 July).

Source: PHEI, Bloomberg; Aldiracita Research (30 Jul 2026).

### Corporate: the A-family has repriced ~170bps; MBMA prices curve-consistent

The PHEI aggregate corporate effective-yield index has risen ~170bps, from 7.07% (Sep 2025) to 8.80% (early July 2026). **The idA secondary curve now sits at 8.95% (3Y) and 9.20% (5Y), a credit spread of ~182bps and ~193bps over govt, with idA yields up 23bps (3Y) and 5bps (5Y) since May.** idA/idA+ names — including Merdeka Battery — are clearing around 8.9–9.5% YTM regardless of original coupon.

**Against this, MBMA's indicative 3Y (9.00–10.00%) and 5Y (9.50–10.50%) imply a ~55–80bps premium over the secondary idA curve, landing inside live idA- comparables (BWPT 11.00%/12.00%) and around idA+/idA prints (OKI 10.00%/10.50%, Lontar Papyrus 9.50%/10.00%). We view this as fair, curve-consistent pricing — a sensible primary premium rather than an outlier.** With no near-term relief window for corporate spreads and BI leadership uncertainty unresolved, we expect new issuers to keep pricing at a somewhat higher cost of funds.

## Financial Overview

### Revenue reflects the nickel price cycle

Revenue peaked at USD1.84bn in FY2024 before normalising to USD1.43bn in FY2025 (–22.2%) on lower nickel prices, then rebounded to USD455.1mn in 1Q2026 (+24.3% YoY). Operating profit rose to USD131.3mn in FY2025 and USD113.4mn in 1Q2026 as cost efficiency improved.

Source: Company financial statements; Aldiracita Research.

Source: Company financial statements; Aldiracita.

### Margins expanded despite lower prices; Moderate, rising leverage; adequate coverage

Gross margin rose to 11.6% (FY2025) and 27.4% (1Q2026) as ore self-sufficiency and MHP lifted the mix. **EBITDA grew 34% YoY to USD219.0mn in FY2025, with EBITDA margin up to 15.3% from 8.8%.** Net profit reached USD100.5mn (FY2025) and USD82.0mn (1Q2026). Liabilities/equity rose to 0.59x (FY2025) and 0.63x (1Q2026) as bond and sukuk balances grew. **Interest coverage remains adequate at 6.35x (FY2025).** Total assets reached USD3.97bn at 1Q2026, funded by USD2.44bn of equity.

## Key Risks

**Nickel price risk.** MBMA's revenue and margins are highly sensitive to global nickel prices. A structural surplus of 261–288kt in 2026 and the battery-mix shift toward LFP could cap prices despite Indonesian supply discipline, pressuring cash flow and coverage.

**Execution & capex risk.** The group is mid-way through a sizeable downstream build-out (HPAL Meiming 83%, SLNC 67% at end-2025). Cost overruns, ramp delays or technology risk on HPAL could raise leverage and defer expected cash flows.

**Leverage, refinancing & FX risk.** Liabilities/equity rose to 0.59x (FY25) with rising bond and sukuk balances; the group must refinance maturing paper in a higher-rate market. USD-denominated earnings against IDR bond obligations also create an FX mismatch to be managed.
